

Features & Benefits of the Foreversoft

24 Hour soft water

Saves you money! You will never have any hard water in your home or your appliances which will help them to last longer.

Contaminates removal

Softer skin, silkier hair, healthy looking glow. Not only does the Foreversoft unit remove chemicals and Chlorine, but will remove or reduce radio activity contaminates.

Twin tank design

The unit will last longer because the Foreversoft cleans itself with soft water and not dirty water like other units do. Better soft water all of the time.

No built in reserve

Saves you money! This is a real benefit as it will save 20% on water and salt usage than a single tank water softener because it does not have a reserve.

Soft water rinse cycle

Foreversoft uses soft water for the final rinse. The benefit is that hard water is not introduced to the softener resin in the tank, again increased savings and better soft water results.

Dry salt storage

Fewer problems which means the water softener will last longer. A great feature because it will eliminate salt bridging in your salt tank, a common problem with most water softeners.
